SUBJECT INDEX

Apparent particle density
of a fine particle, 129

Ball mill circuit simulation
unsteady-state; rapid computational procedure for, 1
Batch sedimentation
of polydispersed suspensions, dynamics of, 105
BET constant *C*
of griseofulvin powders, evaluation by krypton adsorption, 209
Binary solids segregation
in large-particle gas-fluidized beds, quantitative analysis of, 165
Breakage
repetitive impact, of single ore particles; minimization of overbreakage during, 251
Breaking strength
fundamental study of dry and wet grinding from the viewpoint of, 57
Bubbling voidage
minimum, and Geldart classification for gas-fluidized beds, 21

Capacitance probes
transition from slugging to turbulent flow regimes in fluidized beds detected by means of, 49
Characterization of flow regime transitions
in a circulating fluidized bed, 41
Classification
internal, in tumbling grinding mills, 179
Coal
dry; desulphurization of, by fluidized-bed superconducting magnetic separation process, 259
Comparison between two methods of shape-sorting particles, 83

Dimensioning of an extrusion press, 13
Dynamics of batch sedimentation of polydispersed suspensions, 105

Effects of particle shape and size on tensile and strength of powders, 95
Effects of uniform magnetic field on packing of magnetizable granular media, 31
Examination of ultra-fine grinding by preferential grinding, 143
Expansion
and voidage in oil-shale ash fluidized beds with non-uniform particle size distribution, 69
Extrusion press
dimensioning of, 13

Flow regime transitions
in a circulating fluidized bed, characterization of, 41
Fluidized bed(s)
characterization of flow regime transitions in, 41
gas-, large-particle; quantitative analysis of binary solids segregation in, 165
magnetically stabilized, with time-varying magnetic fields, 119
model of mixing–segregation for straw/sand mixtures in, 149
with non-uniform particle size distribution, voidage and expansion in, 69
with screen packing and applied magnetic field, 279
transition from slugging to turbulent flow regimes in, detected by means of capacitance probes, 49
Fluidized-bed combustor
pressurized, gas flow in, 157
Fluidized-bed superconducting magnetic separation process
for dry coal desulphurization, 259
Fundamental study of dry and wet grinding from the viewpoint of breaking strength, 57

Gas flow
in a pressurized fluidized-bed combustor, 157
Gas-fluidized beds
minimum bubbling voidage and Geldart classification for, 21
Geldart classification
and minimum bubbling voidage for gas-fluidized beds, 21
numerical representation of, 225
Granular flows
rapid, of nearly elastic particles including interstitial fluid effects; kinetic model for, 191
Grinding
dry and wet; fundamental study of, from the viewpoint of breaking strength, 57
preferential, examination of ultra-fine grinding by, 143
rheology of concentrated slurries of particles of natural size distribution produced by, 293
ultra-fine; examination of, by preferential grinding, 143
Grinding mills
tumbling; internal classification in, 179
Griseofulvin powders
surface analysis of, by krypton adsorption: evaluation of specific surface area, BET constant *C* and Polanyi adsorption potential, 209

Internal classification
in tumbling grinding mills, 179
Interstitial fluid effects
kinetic model for, 191

© Elsevier Sequoia/Printed in The Netherlands

Kinetic model
for rapid granular flows of nearly elastic particles including interstitial fluid effects, 191
Krypton adsorption
surface analysis of griseofulvin powders by, 209

Magnetic field
uniform; effect of, on packing of magnetizable granular media, 31
Magnetically stabilized fluidized beds with time-varying magnetic fields, 119
Magnetizable granular media
effect of uniform magnetic field on packing of, 31
Microstructure of sedimentary phosphate from Israel, 63
Minimization of overbreakage
during repetitive impact breakage of single ore particles, 251
Minimum bubbling voidage
and Geldart classification for gas-fluidized beds, 21
Mixing–segregation
for straw/sand mixtures in fluidized beds, model of, 149
Mixtures
polydisperse, of particles; simulation of nonsteady sedimentation of, 227
Mixtures of straw/sand
in fluidized beds, model of mixing–segregation for, 149
Model
kinetic, for rapid granular flows of nearly elastic particles including interstitial fluid effects, 191
mixing–segregation for straw/sand mixtures in fluidized beds, 149

Numerical representation of Geldart's classification, 225

Overbreakage
during repetitive impact breakage of single ore particles, minimization of, 251

Packing of magnetizable granular media effect of uniform magnetic field on, 31
Particle(s)
fine, apparent particle density of, 129
of natural size distribution produced by grinding, rheology of concentrated slurries of, 293
nearly elastic; rapid granular flows of, 191
single ore; minimization of overbreakage during repetitive impact breakage of, 251
Particle density
apparent; of a fine particle, 129
Particle shape and size
effect of, on tensile strength of powders, 95
Phosphate
sedimentary, from Israel; microstructure of, 63
Polanyi adsorption potential
of griseofulvin powders, evaluation by krypton adsorption, 209
Powder coating
in a rotary mixer with rocking motion, 135
Powders
effects of particle shape and size on tensile strength of, 95

Quantitative analysis of binary solids segregation in large-particle gas-fluidized beds, 165

Rapid computational procedure
for unsteady-state ball mill circuit simulation, 1
Rheology of concentrated slurries
of particles of natural size distribution produced by grinding, 293

Sand/straw mixtures
in fluidized beds, model of mixing–segregation for, 149
Sedimentary phosphate from Israel
microstructure of, 63
Sedimentation
nonsteady, of polydisperse particle mixtures; simulation of, 227
Segregation
of binary solids in large-particle gas-fluidized beds, quantitative analysis of, 165
and mixing for straw/sand mixtures in fluidized beds, model of, 149
Shape-sorting particles
comparison between two methods of, 83
Simulation of nonsteady sedimentation
of polydisperse particle mixtures, 227
Slugging regimes
transition to turbulent flow regimes in a fluidized bed detected by means of capacitance probes, 49
Specific surface area of griseofulvin powders
evaluation by krypton adsorption, 209
Straw/sand mixtures
in fluidized beds, model of mixing–segregation for, 149
Studies in magnetochemical engineering
experimental study of fluidized beds with screen packing and applied magnetic field, 279
fluidized-bed superconducting magnetic separation process for dry coal desulphurization, 259
Surface analysis of griseofulvin powders
by krypton adsorption: evaluation of specific surface area, BET constant *C* and Polanyi adsorption potential, 209
Suspensions
polydispersed; dynamics of batch sedimentation of, 105

Transition from slugging to turbulent flow regimes in fluidized beds
detected by means of capacitance probes, 49
Turbulent flow regimes
in a fluidized bed, transition to, detected by means of capacitance probes, 49

Unsteady-state ball mill circuit simulation rapid computational procedure for, 1

Voidage
in oil-shale ash fluidized beds with non-uniform particle size distribution, 69
